Canada

THIS GUIDE IS PRODUCED BY

Natural Resources Canada (NRCan) in cooperation with vehicle manufacturers. The Office of Energy Efficiency (OEE) at NRCan thanks the Association of International Automobile Manufacturers of Canada and the Canadian Vehicle Manufacturers' Association for their assistance in the production and distribution of the *2012 Fuel Consumption Guide*. Special thanks are extended to Environment Canada for collecting and compiling the fuel consumption data provided by vehicle manufacturers.

The OEE, Canada's centre of excellence for energy, efficiency and alternative fuels information, is mandated to strengthen and expand Canada's commitment to energy efficiency in order to help address the Government of Canada's policy objectives.

The OEE is pursuing its vision of *Leading Canadians to Energy Efficiency at Home, at Work and on the Road*.

The annual *Fuel Consumption Guide* is one of several decision-making tools available from the OEE's ecoENERGY Efficiency for Vehicles. This program provides Canadian motorists with helpful tips on buying, driving and maintaining their vehicles to reduce fuel consumption and emissions. To learn more, visit vehicles.nrcan.gc.ca.

To order additional copies of the *Fuel Consumption Guide* or other free publications, call 1-800-387-2000 or visit the Web site and click the Publications tab. You can also get a copy of the *2012 Fuel Consumption Guide* at most new vehicle dealerships.

Understanding the Tables

TRANSMISSION

A = Automatic; **E** = Electronic automatic; **M** = Manual; **S** = Automatic with a manual mode; **V** = Continuously variable; **X** = Manual with automatic clutch; Number of gears/speeds (**1,4,5,6,7,8**); Electronic overdrive (**E**); Other overdrive (+).

ESTIMATED FUEL CONSUMPTION VALUES

Shown as city and highway ratings (in litres per 100 kilometres [L/100 km] and miles per imperial gallon [mi./gal.]).

For vehicles that use electricity, values are shown as city, highway and combined ratings, expressed in litres equivalent per 100 kilometers (L_e/100 km), miles per imperial gallon equivalent (mi./gal._e), and kilowatt hours per 100 kilometres (kWh/100 km).

Estimated annual fuel use is based on 20 000 km driven and a combined rating of 55 percent city and 45 percent highway.

CO₂ EMISSIONS

Annual carbon dioxide emissions (in kilograms [kg]) based on estimated annual fuel use and fuel type.

RANGE

For vehicles that use electricity, estimated driving distance (in kilometres) on a fully charged battery or full tank of gasoline.

CHARGE TIME

Estimated time (in hours) at 240 volts to fully charge the battery.

AWD

All-wheel drive - vehicle designed to operate with all wheels powered

4WD / 4X4

Four-wheel drive - vehicle designed to operate with either two wheels or four wheels powered

FV

Flexible fuel vehicle - vehicle designed to operate on gasoline and ethanol blends of up to 85 percent ethanol

CAR CLASSES

T = Two-seater; **S** = Subcompact; **C** = Compact; **M** = Mid-size; **L** = Full-size;

W = Station wagon

LIGHT TRUCK CLASSES

Pickup truck; Special purpose vehicle (sport utility vehicle [SUV]);

V = Minivan; **F** = Large van

ENGINE SIZE / MOTOR

Total displacement of all cylinders (in litres [L]); Electric motor peak power output (in kilowatts [kW])

CYLINDERS

Number of engine cylinders or engine rotors; **R** = Rotary engine

FUEL

X = Regular gasoline; **Z** = Premium gasoline; **D** = Diesel; **E** = Ethanol (E85 - 85 percent ethanol blended with gasoline); **B** = Electricity

Introduction

The 2012 *Fuel Consumption Guide* provides model-specific estimated fuel consumption information about 2012 model year light-duty vehicles, including passenger cars, pickup trucks, minivans, large vans and special purpose vehicles (i.e. sport utility vehicles [SUVs]). The information can be used to compare the fuel consumption of different models and help you to select the most fuel-efficient vehicle that meets your everyday needs.

The guide is published in print and on the Web at vehicles.nrcan.gc.ca.

Fuel use is an ongoing expense and should be considered when purchasing or leasing a vehicle. Choosing the most fuel-efficient and appropriate size of vehicle, driving in a fuel-efficient manner, using your vehicle only when needed and following the manufacturer's operation and maintenance recommendations for your vehicle can save you fuel and money year after year – even more if fuel prices rise.

The choices you make about the vehicle you drive and how you drive it also have a significant impact on the environment and our health. Greenhouse gases (GHGs), particularly carbon dioxide (CO₂), are produced when fuel is burned in your vehicle's engine. CO₂ emissions are directly proportional to the amount of fuel consumed – for every litre of gasoline used, about 2.3 kilograms (kg) of CO₂ are generated. Although not directly harmful to our health, CO₂ emissions contribute to climate change.

Visit vehicles.nrcan.gc.ca to find out more about buying, driving and maintaining your vehicle to save fuel, save money and reduce your impact on the environment.

Taking action to reduce emissions from new cars and light-duty trucks is an essential element of the Government of Canada's strategy to reduce GHG emissions to protect the environment and the health of Canadians. Accordingly, regulations that establish progressively more stringent GHG emission standards for new passenger automobiles and light trucks are now in effect. These regulations align with similar regulations in the United States. The *Passenger Automobile and Light Truck Greenhouse Gas Emission Regulations* are the first regulated national GHG emission standards in Canadian history and will achieve significant and sustained GHG reductions and fuel-saving benefits.

To learn more about the Government of Canada's efforts to address climate change in ways that achieve real environmental and economic benefits for all Canadians, visit ecoaction.gc.ca.

To request additional copies of the guide, call 1-800-387-2000 (toll-free).

A MESSAGE FROM VEHICLE MANUFACTURERS

The 2012 *Fuel Consumption Guide* and the EnerGuide fuel consumption label included with all new light-duty vehicles are produced in cooperation with vehicle manufacturers and Natural Resources Canada.

Purchasing a new vehicle is a major decision involving many factors. The information in this guide will assist you in comparing relative fuel consumption ratings among vehicles that meet your utility, performance and lifestyle needs. While the fuel consumption ratings of a vehicle are one purchase consideration, how you operate and maintain your vehicle also affects the amount of fuel consumed.

To optimize fuel efficiency, your vehicle must be properly maintained and run on clean, high-quality fuels. To reduce the amount of fuel you use, always follow the recommendations for fuel formulation and for vehicle maintenance and operation provided in your owner's manual.

Together we can reduce the amount of fuel used for personal transportation and the resulting GHGs.

About fuel consumption ratings

The fuel consumption information appearing in the annual *Fuel Consumption Guide* is collected in conjunction with Environment Canada's (EC's) Energy and Transportation Directorate. EC monitors the emissions of new light-duty vehicles sold in Canada by collecting detailed data from manufacturers and importers and by testing selected vehicles.

Vehicle manufacturers test their own vehicles using standardized testing and analytical procedures to generate the fuel consumption data published in this guide and shown on the EnerGuide Label for Vehicles. EC compiles the data received from the vehicle manufacturers, and Natural Resources Canada (NRCan) uses this data and other information to publish the *Fuel Consumption Guide*.

Fuel consumption ratings are available for light-duty vehicles only. Vehicle manufacturers are not required to submit fuel consumption data for the following:

- special purpose vehicles (i.e. SUVs) and passenger vans with a gross vehicle weight rating (GVWR) of more than 4536 kg (or 10 000 pounds [lb.]) – GVWR is the weight of the vehicle plus maximum carrying capacity (passengers and cargo)
- other vehicles with a GVWR of more than 3856 kg (8500 lb.) or a curb weight of more than 2722 kg (6000 lb.) – curb weight is the weight of the vehicle without passengers and cargo

Vehicles that exceed these limits are not tested, so their fuel consumption is not available for the guide or EnerGuide label.

Also, in some cases, fuel consumption information was unavailable before publication, so some new vehicle models may not appear in the printed guide. To find the latest updated fuel consumption ratings for light-duty vehicles, visit vehicles.nrcan.gc.ca or consult your vehicle manufacturer or dealer.

Fuel consumption testing

It would be difficult to drive every model of new vehicle on the road to measure fuel consumption. Also, it would be almost impossible to consistently duplicate on-road testing results because so many variables have an impact on the vehicle. Instead, a controlled laboratory testing method is followed to ensure that all vehicles are tested under identical conditions and that the results are consistent and repeatable. The values generated through this procedure allow fair and reliable comparisons of the relative fuel consumption of different vehicles.

Estimated fuel consumption ratings are derived from two test cycles:

- **city test** - simulates urban driving in stop-and-go traffic.
- **highway test** - simulates a mixture of open highway and rural road driving, typical of longer trips.

Note: Additional testing criteria are used to derive the estimated fuel/energy consumption ratings of battery electric vehicles (BEVs) and plug-in hybrid electric vehicles (PHEVs). These additional criteria result in higher estimated consumption ratings compared to conventional testing.

CAUTION ON USING U.S. FUEL ECONOMY DATA

Fuel consumption ratings in Canada and fuel economy ratings in the United States differ significantly.

Beginning with model year 2008, the United States implemented additional testing cycles and procedures for fuel economy ratings. Furthermore, U.S. fuel economy ratings are listed in miles per U.S. gallon and are averaged based on U.S. sales and adjustment factors.

For more information on vehicle fuel consumption testing and **answers to frequently asked questions**, visit vehicles.nrcan.gc.ca.

Your fuel consumption will vary

The estimated ratings that appear on the EnerGuide Label for Vehicles and in the *2012 Fuel Consumption Guide* show the fuel consumption that may be achieved with a properly maintained vehicle driven with fuel efficiency in mind.

The ratings provide a reliable comparison of the fuel consumption of different vehicles. However, no test can simulate all possible combinations of conditions that may be experienced by drivers. Your vehicle's fuel consumption will vary from the published ratings, depending on how, where and when you drive.

The following factors can significantly affect the fuel consumption of your vehicle: your driving style and behaviour, vehicle acceleration, braking and driving speed, overall age and condition of your vehicle, temperature, weather, traffic and road conditions, and drive systems and powered accessories (e.g. air conditioning) installed on your vehicle. In addition, small variations in vehicle manufacturing can cause fuel consumption differences in the same make and model, and some vehicles don't attain optimal fuel consumption until they are "run in" for about 6000 to 10 000 km.

The published estimated ratings are a useful tool for comparing vehicles before you buy, but they may not accurately predict the fuel consumption you will get.

For more information on fuel consumption ratings and factors that affect fuel consumption, including tips to get the most fuel savings out of your new vehicle, visit vehicles.nrcan.gc.ca.

EnerGuide Label for Vehicles

The EnerGuide label is affixed to all new light-duty vehicles – including passenger cars, pickup trucks, special purpose vehicles and vans – for retail sale in Canada. The label provides the model-specific estimated fuel consumption for the vehicle to which it is affixed. Use the EnerGuide label to compare new vehicle fuel consumption information and identify the most fuel-efficient new vehicle for your everyday needs.

The EnerGuide Label for Vehicles has a standardized design (as illustrated). It is affixed to the vehicle alone or as part of the vehicle options and price label. EnerGuide labels should remain on new vehicles until they are sold. If a new vehicle has no label, ask the dealer for the manufacturer's fuel consumption ratings for the vehicle, consult this guide or visit vehicles.nrcan.gc.ca.

The estimated fuel consumption ratings that appear on the EnerGuide label are provided by vehicle manufacturers and are based on standardized testing procedures performed under controlled conditions.

Use the EnerGuide label and *Fuel Consumption Guide* to compare the fuel consumption information and the estimated annual fuel cost of vehicles.

- 1 EnerGuide is the official Government of Canada mark for rating and labelling the energy consumption or energy efficiency of products, such as appliances, heating and cooling equipment, new vehicles and houses that have had an energy efficiency evaluation. For more information on EnerGuide, visit oee.nrcan.gc.ca/energuide.
- 2 Compare the city and highway fuel consumption ratings of different vehicles to find out which vehicles consume the least amount of fuel.
- 3 Use the estimated annual fuel cost based on fuel type to assess potential fuel costs and savings when comparing vehicles.
- 4 If your new vehicle dealer is out of stock, use the contact information on the label to order your free copy of the 2012 *Fuel Consumption Guide*.

Comparing vehicles

Use the vehicle tables in this guide to compare the estimated annual fuel consumption and costs for 2012 model year vehicles. The vehicle with the best estimated fuel consumption ratings and lowest estimated annual fuel use will save you fuel and money for years. Remember, the lower the litres per 100 kilometres (L/100 km) rating, the lower the fuel consumption. Conversely, the higher the miles per gallon (mi./gal.) rating, the better the fuel use.

To find the fuel consumption ratings and estimated annual fuel use of 1995–2012 model year vehicles before you buy or lease, visit vehicles.nrcan.gc.ca.

Vehicle classes used in this guide

In the guide, cars are divided into six classes – four are based on an interior volume index that combines passenger and trunk or cargo space, and two are based on car line (two-seaters and station wagons). Light trucks are divided into four classes – pickup trucks, special purpose vehicles (i.e. SUVs), minivans and large vans.

Cars		Light trucks
Class	Interior volume	Class
Two-seater (T)		Pickup truck
Subcompact (S)	less than 2830 L (100 cu. ft.)	Special purpose vehicle
Compact (C)	2830–3115 L (100–110 cu. ft.)	Minivan (V)
Mid-size (M)	3115–3400 L (110–120 cu. ft.)	Large van (F)
Full-size (L)	more than 3400 L (120 cu. ft.)	
Station wagon (W)		

Conversions used in this guide

To convert L/100 km into mi./gal. or mi./gal. into L/100 km, use the following formulas:

$$\text{L/100 km} = \frac{282.48}{\text{mi./gal.}} \quad \text{mi./gal.} = \frac{282.48}{\text{L/100 km}}$$

4.546 L = 1 imperial gallon = 1.2 U.S. gallons

To help you compare vehicles that use electricity, a conversion factor is used to convert energy consumption values into litres equivalent per 100 kilometres ($L_e/100 \text{ km}$) and miles per imperial gallon equivalent (mi./gal.e).

One litre of gasoline contains the energy equivalent of 8.9 kilowatt hours (kWh).

One imperial gallon of gasoline contains the energy equivalent of 40.5 kWh.

Calculating estimated annual fuel use

Estimated annual fuel use in the guide is based on an annual driving distance of 20 000 km with a mix of 55 percent city driving and 45 percent highway driving.

Your annual fuel use =

$$\frac{\text{annual distance travelled (km)} \times \text{fraction of city driving} \times \text{city fuel consumption rating}}{100}$$

+

$$\frac{\text{annual distance travelled (km)} \times \text{fraction of highway driving} \times \text{highway fuel consumption rating}}{100}$$

NOTE: The calculation used to determine the estimated annual fuel use values in this guide is based on the combined fuel consumption rating. This combined rating is calculated using precise city and highway fuel consumption values that are later rounded for publication. Consequently, vehicles with identical published city and highway fuel consumption ratings may not have identical estimated annual fuel use values, due to the rounding process.

Calculating estimated annual fuel cost

Estimated fuel costs for 2012 are based on forecast prices of \$1.05/L for regular gasoline, \$1.15/L for premium gasoline, \$1.15/L for diesel fuel and \$0.12/kWh for electricity.

Pricing for E85 is not provided in the guide.

Your annual fuel cost =
your annual fuel consumption × fuel price

REMEMBER: Fuel prices higher than the above forecasts will result in annual costs higher than those printed in this guide and on the EnerGuide label.

Calculating estimated annual CO₂ emissions

CO₂ emissions are based on the amount and type of fuel, using conversion factors of 2.3 kg of CO₂ per litre of gasoline, 2.7 kg of CO₂ per litre of diesel fuel, 1.6 kg of CO₂ per litre of E85, and 0 kg of CO₂ for electricity.

Your annual CO₂ emissions =
your annual fuel use × fuel conversion factor

REMEMBER: The lower your fuel use and CO₂ emissions, the lower your impact on the environment.

Alternative fuels and technologies

Ethanol

Ethanol is a renewable fuel made from plant materials that absorb CO₂ while growing. Because of this, using ethanol in place of non-renewable fossil fuels, such as gasoline, reduces GHG emissions. The level of GHG emissions reduction depends on a number of factors, including the percentage of ethanol in the fuel blend.

All major vehicle manufacturers design their vehicles to run year-round on gasoline containing an ethanol blend of up to 10 percent (E10), without modification. E10 is available at many service stations across Canada.

Several vehicle manufacturers offer flexible-fuel vehicles (FFVs) that can run on ethanol blends of up to 85 percent ethanol (E85) and 15 percent gasoline. Ethanol contains less energy than gasoline, so in higher-level blends such as E85, more fuel is needed to travel the same distance. Refer to the vehicle tables in this guide for FFV model availability and fuel consumption information.

Biodiesel

Biodiesel is another fuel made from renewable resources (plant or animal materials). Using blends of diesel fuel with biodiesel can reduce GHG emissions compared with using unblended diesel. The level of GHG emissions reduction depends on a number of factors, including the percentage of biodiesel in the fuel blend. New diesel-powered vehicles are designed to operate on diesel fuel containing up to 5 percent biodiesel (B5) year-round, without modification.

Electricity

Electricity is a readily available energy source that is used as a fuel in three types of vehicles: battery-electric, hybrid-electric and plug-in hybrid electric.

Battery-electric

Battery-electric vehicles (BEVs) are powered by electric motors that draw electricity from on-board rechargeable storage batteries. When the batteries run low, they must be plugged into the power grid to recharge. Electric vehicles produce no tailpipe emissions.

Hybrid-electric

Hybrid-electric vehicles (HEVs) combine a battery-powered electric motor with a conventional internal combustion engine. Thus they offer the driving range and rapid refuelling of conventional vehicles, together with features of electric vehicles. Hybrids cannot be charged using external electricity – they use the gasoline engine, regenerative braking, and the energy produced from coasting to recharge their batteries. Through increased fuel efficiency and reduced fuel use, hybrids can reduce GHG emissions.

Plug-in hybrid electric

Plug-in hybrid electric vehicles (PHEVs) are hybrids with high-capacity batteries that can be charged by plugging them into the power grid. They can run in electric-only mode until the battery charge is depleted. Although PHEVs don't have to be plugged in to be driven, they will not achieve maximum driving range or optimal fuel consumption without charging. When operating in electric mode, plug-in hybrids produce no tailpipe emissions.

For more information on these and other alternative fuels and technologies, visit vehicles.nrcan.gc.ca.

Saving fuel: Tips on driving and maintenance

Once you have chosen the most fuel-efficient vehicle for your everyday needs, you can achieve additional savings and reduce your vehicle's impact on the environment by following these tips.

Consult your owner's manual. It contains important information about how to drive and maintain your vehicle for optimum performance and efficiency.

Driving tips

- **Accelerate gently:** The harder you accelerate, the more fuel you use. In the city, where about half of the fuel you consume is used to accelerate your vehicle, you can save as much as 15 percent by pressing the pedal gently. Imagine an open cup of coffee on your dashboard – don't spill it!
- **Maintain a steady speed:** You will not only consume less fuel but also help enhance traffic flow, minimize emissions and enjoy safer driving conditions. Use cruise control for highway driving, where conditions permit, to maintain a steady speed and optimize your fuel savings.
- **Anticipate traffic:** Hard braking and rapid acceleration burn more fuel and are unsafe. Drive defensively and watch ahead for changes in traffic flow. When possible, leave plenty of space between you and the vehicle in front of you.
- **Coast to decelerate:** By anticipating slowdowns and removing your foot from the accelerator as early as possible, you can decrease your speed and conserve fuel. Most vehicles today have fuel-injection systems that automatically shut off the flow of fuel to the engine when the accelerator is released, so take advantage by coasting.
- **Avoid high speeds:** The faster a vehicle travels above 80 km/h, the more fuel it consumes. For example, a vehicle needs 20 percent more fuel to go 120 km/h than to go 100 km/h. Slow down for safer and more fuel-efficient driving.
- **Don't idle unnecessarily:** If you are going to be stopped for more than 60 seconds – when parked – turn the engine off.

- **Use air conditioning sparingly:** Due to the extra load on the engine, air conditioning can increase your vehicle's fuel consumption by 20 percent. Roll down your windows when city driving, or use your vehicle's flow-through ventilation on the highway.
- **Lighten your load:** Roof and bicycle racks decrease your vehicle's aerodynamics and heavy items in your trunk add weight, causing your vehicle to burn more fuel. Take only what you need.
- **Make one long trip instead of several short ones:** Separate trips of less than 5 km do not allow a cold engine to reach its peak operating temperature, resulting in increased fuel consumption and emissions. Combine trips into one outing to save time, fuel and money.
- **Leave your vehicle at home:** Walk, bike, carpool or take public transit whenever possible.

Maintenance tips

- **Follow your vehicle's recommended maintenance schedule:** A poorly maintained vehicle may consume more fuel. Poor maintenance adversely affects performance, produces higher levels of emissions and often leads to expensive repairs and low resale value.
- **Check fluid levels at least once a month:** Check and change the engine oil, engine coolant, automatic transmission and other fluids according to the manufacturer's recommendations in your owner's manual.
- **Check your tires:** Measure the inflation level of your tires once a month, preferably when they are cold. A tire under-inflated by just 56 kilopascals (8 pounds per square inch) can lose 15 000 km from its lifespan and increase your vehicle's fuel consumption by 4 percent. To find your vehicle's recommended tire pressure, look for the vehicle information placard affixed to your vehicle, or check your owner's manual.

Track your fuel consumption

Using our on-line Fuel Consumption Calculator, you can calculate and track your fuel consumption and compare it with the EnerGuide ratings. You can also share and compare your fuel consumption with other users. Visit vehicles.nrcan.gc.ca and select the Track Your Fuel Consumption tab.

ecoENERGY for Vehicles Awards

NRCAN recognizes the manufacturers of the most fuel-efficient new light-duty vehicles (MFEVs) in their class sold in Canada each model year. Best-in-class vehicles have the lowest estimated annual fuel use, determined by testing that simulates 20 000 km driven with a mix of 55 percent city and 45 percent highway. For more information about current and previous MFEVs, visit vehicles.nrcan.gc.ca.

The Most Fuel-Efficient Vehicles for Model Year 2012

Two-seater			
Honda CR-Z			
1.5 L, 4 cylinder hybrid, continuously variable (CVT)		Annual fuel cost: \$1,113	
City: 5.6 L/100 km (50 mi./gal.)		Annual fuel use: 1060 L	
Hwy: 5.0 L/100 km (56 mi./gal.)		CO ₂ emissions/yr: 2438 kg	
smart fortwo			
1.0 L, 3 cylinder, 5-speed automatic (with manual mode)		Annual fuel cost: \$1,219*	
City: 5.8 L/100 km (49 mi./gal.)		Annual fuel use: 1060 L	
Hwy: 4.7 L/100 km (60 mi./gal.)		CO ₂ emissions/yr: 2438 kg	
Subcompact			
Mitsubishi i-MiEV			
49 kW electric motor, 1-speed automatic		Annual fuel cost: \$449	
City: 1.9 L _e /100 km (149 mi./gal. _e)		Annual fuel use: 3740 kWh (420 L _e)	
Hwy: 2.4 L _e /100 km (118 mi./gal. _e)		CO ₂ emissions/yr: 0 kg	
Compact			
Chevrolet Volt**			
111 kW electric motor / 1.4 L, 4 cylinder plug-in hybrid, continuously variable (CVT)			
electricity	City: 2.5 L _e /100 km (113 mi./gal. _e)		
	Hwy: 2.5 L _e /100 km (113 mi./gal. _e)	Annual fuel cost: \$869*	
gasoline	City: 6.7 L/100 km (42 mi./gal.)	Annual fuel use: 780 L _e	
	Hwy: 5.9 L/100 km (48 mi./gal.)	CO ₂ emissions/yr: 1088 kg

Pickup truck			
Toyota Tacoma			
2.7 L, 4 cylinder, 5-speed manual	Annual fuel cost: \$1,869	City: 10.0 L/100 km (28 mi./gal.)	Annual fuel use: 1780 L
Hwy: 7.7 L/100 km (37 mi./gal.)	CO ₂ emissions/yr: 4094 kg		
Special purpose vehicle			
Ford Escape Hybrid			
2.5 L, 4 cylinder hybrid, continuously variable (CVT)	Annual fuel cost: \$1,281	City: 5.8 L/100 km (49 mi./gal.)	Annual fuel use: 1220 L
Hwy: 6.5 L/100 km (43 mi./gal.)	CO ₂ emissions/yr: 2806 kg		
Minivan			
Mazda5			
2.5 L, 4 cylinder, 5-speed automatic (with manual mode)	Annual fuel cost: \$1,743	City: 9.5 L/100 km (30 mi./gal.)	Annual fuel use: 1660 L
Hwy: 6.7 L/100 km (42 mi./gal.)	CO ₂ emissions/yr: 3818 kg		
Large van			
Ford Transit Connect Van			
2.0 L, 4 cylinder, 4-speed automatic	Annual fuel cost: \$1,848	City: 9.9 L/100 km (29 mi./gal.)	Annual fuel use: 1760 L
Hwy: 7.4 L/100 km (38 mi./gal.)	CO ₂ emissions/yr: 4048 kg		

Note: Additional testing criteria are used to derive the estimated fuel/energy consumption ratings of battery electric vehicles (BEVs) and plug-in hybrid electric vehicles (PHEVs). These additional criteria result in higher estimated consumption ratings compared to conventional testing.

L_e is gasoline litre equivalent; gal_e is gasoline imperial gallon equivalent

One litre of gasoline contains the energy equivalent of 8.9 kWh

One imperial gallon of gasoline contains the energy equivalent of 40.5 kWh

L_e signifie litre équivalent d'essence; gal_e signifie gallon impérial équivalent d'essence

Un litre d'essence contient l'équivalent en énergie de 8,9 kWh

Un gallon impérial d'essence contient l'équivalent en énergie de 40,5 kWh
